

Call for papers for a Special Issue in *Quaternary International*

Applications and multi-proxy approaches in Geoarchaeology

Anna Pint

Department of Geography; University of Cologne, Germany

Steffen Schneider

Lower Saxony Institute for Historical Coastal Research, Wilhelmshaven, Germany

Martin Seeliger

Department of Geography; University of Cologne, Germany

The complete understanding of Human and landscape history and their complex interactions is a highly topical desideratum of modern science in general, and, in particular, of landscape archaeology and geoarchaeology. A variety of specialized scientific disciplines focuses on the investigation of different aspects of past societies and paleo-environmental changes and conditions. However, in order to gain as comprehensive a picture as possible, all disciplines have to work together and couple their broad range of methods and approaches.

We, Anna Pint (University of Cologne; Germany), Martin Seeliger (University of Cologne; Germany) and Steffen Schneider (NIHK Wilhelmshaven; Germany) have been working on the reconstruction of maritime, coastal and terrestrial landscapes over the past years and our understanding of the need for and strength of coupling different methods resulted in a session on multi-proxy approaches at the Landscape Archaeology Conference 2016 in Uppsala.

Because of the interest in the session and the positive outcome, we feel encouraged to continue our effort and to call for papers for a Special Issue of 'Quaternary International' with the working title 'Applications and multi-proxy approaches in Geoarchaeology'.

If you are interested in handing in a contribution, please send us tentative title, list of authors (institutional e-mail addresses) and two possible reviewers not later than 30.09.2016. If you want to have more information or if you have any questions, do not hesitate to contact us.
